

Exceeding Objective

Science Studies Weekly Adventure – Space

-0 10/10

Name: Lizzie WOW!

When can you see the moon?

Day

Night

Both

I'm proud of
your hard
work!

Name three things we can see at night:

the moon

stars

bright planets

What helps people see things in space?

telescope

The way the moon looks has a pattern.

Look at the different phases of the moon. Make an observation.

I see a full moon, and a new moon,
and a Q

What word do the letters spell (page 4)?

Space

Write T for true or F for false.

T

There are many things in space.

T

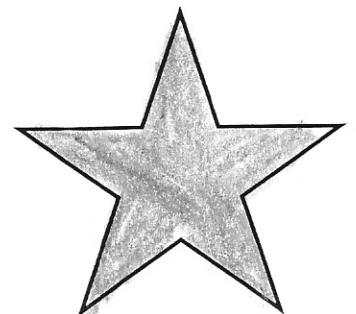

Sometimes we can see bright planets at night.

F

We can see everything in space from Earth.

F

The moon looks the same from Earth every night.

stars

moon

space (bright planets)

(telescope)

X What helps people see things in space?

Microscopes

X The way the moon looks has a

crescent (pattern)

Look at the different phases of the moon. Make an observation.

Full Moon

Dark Moon

What word do the letters spell (page 4)?

space

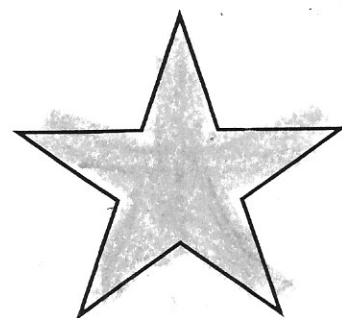

Write T for true or F for false.

There are many things in space.

Sometimes we can see bright planets at night.

We can see everything in space from Earth.

The moon looks the same from Earth every night.

Caroline

Mercury is made mostly of iron. Mercury and the moon both have many craters. You can see Mars without a telescope. Mars is called the red planet.

Space Book Notes

Addie

Some times the
wind on Saturne
blows 1,100 miles
Per hour.

that is ten times
faster than the
wind inside a
tornado on Earth.

Space Book Notes

Eden

Neptune looks blue
Saturn has rings
